

OpenEdge® 10 Platform & Product Availability Guide

Last updated: February 22, 2008

Previous version: January 18, 2008

Introduction

The OpenEdge® Platform & Product Availability Guide reflects the current commercial releases for Progress Software's OpenEdge 10 products. This document does NOT address unannounced future product release plans. The information contained in this document is updated on a regular basis and is subject to change without notice.

For information on the Progress® product line (Progress Versions 8 through 9), please see the *Progress Platform & Product Availability Guide*.
http://www.progress.com/progress_software/products/docs/bu_sep/pavail.pdf

Update Summary

Updates are highlighted in red.

Previous statements announced our support for Windows 64-bit to be part of the 10.1C release. Based on customer feedback; what Progress was planning to deliver did not meet the needs of our customers. Support for Windows 64-bit deployments requires an environment that allows self-service clients, AppServers, and ODBC support along with the Database and SQL Server products. OpenEdge developers are working on this effort, and once we have established the scope of this project we will announce a new release time-frame. We apologize for the change from 10.1C; however, our goal remains a well-tested functionally-complete production environment.

OpenEdge 10 32-bit Products are supported on operating systems that can either sustain 32-bit or 64-bit kernel modes. Windows 32-bit applications under OpenEdge can be used on Windows 64-bit and are supported today. What does this mean to a user?

On a 32-bit OS, the OS can only access 4 GB of memory. All applications running on the OS have an address space (to store the program and stack, data and shared memory) of about 2 GB of memory depending on the platform.

On a 64-bit OS, the OS can access Terabytes of memory if the machine has that much memory available. Any 32-bit application is still limited to accessing about 2 GB of memory (varies by platform). Any 64-bit application can access all the memory on the machine.

Overall, the more data from the database that you can fit into memory, the faster the application will run. This is usually accomplished by using the OpenEdge Database Buffer Pool (-B) parameter defining the size of the OpenEdge buffer pool, or how many rows of data you can have in memory at one time.

64-bit OS, and 64-bit OpenEdge - user can use all the physical memory available for the OpenEdge buffer pool
64-bit OS, and 32-bit OpenEdge - user have about 2 GB of memory (varies by platform) for their user address space (program, stack, data and shared memory), but the OS can use the remaining memory for its generic Data Cache
32-bit OS, and 32-bit OpenEdge - user have about 2 GB of memory (varies by platform) for their user address space (program, stack, data and shared memory).

For additional shared-memory information on 32-bit platforms with OpenEdge 10.1B and higher, please reference the RDBMS Shared Memory [whitepaper](#) on PSDN.com

Please feel free to send any questions or concerns directly to Kristen Howell, Platform Product Manager, khowell@progress.com.

- **Added OpenEdge 10.1C Release Information**
- **Added Oracle 8i support back to the document**
- **Added addition DB2 support for OpenEdge DataServers for ODBC**
- **Updated ODBC Driver details in note M ([page 9](#))**
- **Moved the OpenEdge 10.1B Information in the Legacy OpenEdge Editions ([page 15](#))**
- **Removed 10.1A and 10.0B Legacy information**

- Dropped Support for SuSE 8
- Dropped Support for DB2 UDB 7.2 (MVS, RS/6000,NT)
- Dropped Support for Red Hat AS 2.1 and 3.0. The new build platform is Red Hat AS 4.0
- Dropped Support for HP Tru64 platform
- Dropped Support for OpenEdge DataServer for Oracle on the HP UX 32-bit platform
- Updated De-Supported Features and Functionality List with OpenEdge DataServer for Oracle, HP Tru64, Windows 2000, IBM AIX, and Crystal 10 information ([page 20](#))
- Removed Packaging Information ([Appendix A](#))
- Added note for NO IPv6 Support for Windows 2000
- Added a Windows 2000 SP4 note Q to ([page 11](#))
- Added support for Windows Server 2003 R2 64bit (starting with 10.0B)
- Added XML support for Linux on PowerPC
- Removed EasyAsk listed under third party product information

Notes on Platforms and Products

- Build Platform:** This Operating System edition is used for the compilation and building of the OpenEdge Binaries. Custom binary creation using OpenEdge Build Scripts should be performed using this Operating System.
- Certification:** This Operating System edition has been tested using the binaries created under the 'Build Platform'
- Limited:** Certain restrictions apply. Please refer to the 'Platforms and Product Notes' chapter for more details.
- LifeCycle Status:** For full details refer to: http://www.progress.com/progress_software/products/docs/lifecycle.pdf

OS Service Pack / Maintenance Pack Support: OS updates are not automatically certified but are supported where the OS vendor guarantees backwards compatibility with the base line OS level. Certification of OS updates may be performed if the backwards guarantee compatibility of the OS Service Pack / Maintenance Pack is questionable.

A. 32Bit & 64Bit x86 environments (Operating Systems & CPU)

OpenEdge 10 32-bit Products are supported on operating systems that can either sustain 32-bit or 64-bit kernel modes.

ODBC clients using the 32-bit OpenEdge ODBC Driver: The SQL application needs to be compiled in 32 bit mode.

The following table defines the support of OpenEdge products for the Microsoft Windows and Linux x86 based operating systems in relationship to hardware (CPU) support:

Platform – CPU Type		OpenEdge version - CPU type – Media ID	
Operating System (Edition / Distribution)	Hardware CPU Type	Certified and Supported	Comments
Microsoft Windows 32 Bit Intel XP Professional Server 2000 Server 2003 Tablet XP Vista	32 Bit CPU	OpenEdge R10.0 32 Bit Media-ID 146 OpenEdge R10.1 32 Bit Media-ID 146 OpenEdge R10.1B03 32 Bit Media-ID 146 (Vista) (note P)	Native operating system and hardware support
	64 Bit CPU	OpenEdge R10.0 32 Bit Media-ID 146 OpenEdge R10.1 32 Bit Media-ID 146 OpenEdge R10.1B03 32 Bit Media-ID 146 (Vista) (note P)	Supported but not optimized for 64Bit hardware
Microsoft Windows 64 Bit Intel XP Professional Server 2003 Vista	64 Bit CPU	OpenEdge R10.0 32 Bit Media-ID 146 OpenEdge R10.1 32 Bit Media-ID 146 OpenEdge R10.1B03 32 Bit Media-ID 146 (Vista) (note P)	Supported but not optimized for 64Bit Operating System or hardware
Linux 32Bit Intel x86 Red Hat Enterprise Linux 4.0 & 5.0 Novell SuSE Enterprise Linux 9 & 10	32 Bit CPU	OpenEdge R10.0 32 Bit Media-ID 178 OpenEdge R10.1 32 Bit Media-ID 178	Native operating system and hardware support
	64 Bit CPU	OpenEdge R10.0 32 Bit Media-ID 178 OpenEdge R10.1 32 Bit Media-ID 178	Supported but not optimized for 64Bit hardware
Linux 64Bit Intel EM64T / AMD64 Red Hat Enterprise Linux 4.0 & 5.0 Novell SuSE Enterprise Linux 9 & 10	64 Bit CPU	OpenEdge R10.1A 64 Bit Media-ID 192	Native Operating System and hardware support
		OpenEdge R10.0 32 Bit Media-ID 178 OpenEdge R10.1 32 Bit Media-ID 178	Supported but not optimized for 64Bit Operating System or hardware
Dependant on the platform vendor(s) guarantee to support 32 Bit executables. Memory usage (e.g. RDBMS buffer pool & client processes) limited to 32 Bit addressing			

B. Failover Cluster Managers certified and supported by OpenEdge 10:

- Microsoft Cluster Services MSCS V1.2 Windows Server 2003 Enterprise Edition (32Bit)
- IBM HA Cluster (HACMP) 5.1– Only for OpenEdge 10.1A and below (32Bit)
- IBM HA Cluster (HACMP) 5.3 – Only for OpenEdge 10.1B and above (32Bit & 64Bit)
- Sun Solaris Sun Cluster 2.2 & 3.0 & 3.1
- HP-UX Service Guard 11.0 & 11i (PA-RISC)
- HP-UX Service Guard 11i (Itanium2) – Only for OpenEdge 10.1B and above

C. Oracle RDBMS Support:

Indicates platforms where the Oracle RDBMS product may not be commercially available but the OpenEdge DataServer can be installed to provide client/server access to remote Oracle RDBMS instances. For operating systems that support 32-bit and 64-bit applications, Oracle 10g and Oracle 9i release 2 is only available as a 64-bit product. The 32-bit based OpenEdge DataServer for Oracle is able to access a 64-bit Oracle Database instance via 32-bit Oracle Client software.

Notes on Platforms and Products (continued)

- D. OpenEdge & Sonic: 10.1C include the SonicMQ 7.5.1 Client as part of the OpenEdge Adapter for SonicMQ, and provide support for Sonic ESB 7.5.1 containers as part of the OpenEdge Adapter for Sonic ESB. Sonic 7.5.1 is supported on a subset of the OpenEdge-supported platforms, so it is important to understand what platforms can be used if you plan to use the OpenEdge Adapter for SonicMQ and/or the OpenEdge Adapter for Sonic ESB. For a complete support matrix of OpenEdge and Sonic components, please refer to *the OpenEdge Adapters for Sonic Platform Support and Compatibility* on-line document located on <http://www.psdn.com/>.

The following table describes what OpenEdge products deliver the OpenEdge Adapter for SonicMQ and the OpenEdge Adapter for Sonic ESB. The OpenEdge to MQ connectivity modes available with each product are also listed. Note: the ClientConnect and ServerConnect modes became available starting with OpenEdge 10.1A. The BrokerConnect mode is the original (pre-10.1A) method for messaging between a 4GL/ABL application and the SonicMQ client using the OpenEdge Adapter for SonicMQ.

OpenEdge Product	OpenEdge Adapter for SonicMQ Connectivity Modes			OpenEdge Adapter for Sonic ESB

- E. File System Support (NFS, iSCSI, CIFS & Encrypted File Systems): The Common Internet File System (CIFS) protocol is not supported by Progress Software OpenEdge products. iSCSI support is available beginning with the OpenEdge 10.1A release. The Network File System (NFS) protocol version 3 (NFSv3) is supported for all OpenEdge UNIX and Linux platforms (Linux NFSv3 support requires specific kernel updates, please refer to the Linux section in this document for more details). File System Level Encryption: OpenEdge products have no restrictions in leveraging UNIX/Linux/Windows Encrypted File Systems as long as the Encryption technology is truly transparent to the Operating System. No formal certification of Encrypted File System Technology is planned but to ensure that theory actually does match practice OpenEdge 10.1B has been tested and validated to run with the Microsoft Windows Encrypting File System (EFS). The EFS technology transparently allows files to be stored encrypted on NTFS file systems.
- F. Software support policy for Windows Tablet XP 2005: The Microsoft Windows XP Tablet 2005 operating system is a superset of the Windows XP Professional operating system; applications that are compatible with Windows XP Professional also run on Windows XP Tablet 2005 Edition. Progress Software does not guarantee support for Windows Tablet XP 2005 features that are not part of the Windows XP Professional operating system and any issues found with these Tablet XP features relating to Progress Software products, will need to be proven against the Windows XP Professional operating system before contacting Progress technical support. For more details on Windows Tablet XP 2005 features, support and compatibility please refer to the following on-line Microsoft documentation:
<http://support.microsoft.com/default.aspx?scid=kb:en-us:327160>

Notes on Platforms and Products (continued)

- G. Application Virtualization software support & certification policies: Application Virtualization Software such as Citrix Metaframe, Citrix Presentation Server, HOBLink, VMware, XenSource and MS Windows Terminal Server are classified as products that provide an abstraction layer that decouples the physical hardware from the ‘guest’ operating system to deliver greater IT resource utilization and flexibility. Progress Technical Support will provide ‘best effort’ assistance with Application Software environments but can only log product deficiency bugs if the problem can be demonstrated in a non Application Virtualization Software environment. We support the following minimum configurations of virtualization technologies:

- Citrix MetaFrame XPe
- Citrix MetaFrame v 1.8 for Win2K
- Windows Terminal Server (2000 & 2003)
- Citrix Presentation Server (3.0 & 4.0 MS Windows)
- VMware GSX Server 3.1
- VMware Workstation 5
- VMware ESX Server 2.5
- Solaris Zones/Containers
- HOBLink (MS Windows)

- H. SCO OpenServer 6 certification and support: SCO OpenServer 6 certification is dependant on the platforms ability to natively support UnixWare 7.1.x applications. OpenEdge 10 support for OpenServer 6 is achieved via the UnixWare 7.1.4 OpenEdge product offering (Media ID 191). For more details regarding UnixWare and OpenServer 6 compatibility please refer to the following URL: http://www.sco.com/products/openserver6/single_cert.html

SCO Platform	Progress Edition	4GL RDBMS support	SQL RDBMS support	SQL stored procedures & triggers	Native JDBC Driver	Native ODBC Driver	Sonic Adapter for MQ	Sonic Adapter for ESB
OpenServer 5.0.7 ⁽¹⁾	Progress V9.1E	✓	✗	✗	✗	✗	✓	✗
	OpenEdge 10	Not Supported						
UnixWare	Progress V9.1E	✓	✓	✓	✗	✗	✓	✗
	OpenEdge 10.0B	✓	✓	✓	✗	✗	✓	✗
	OpenEdge 10.1B OpenEdge 10.1C	✓	✓	✓	✗	✗	✓	✗
OpenServer 6	Progress V9.1E	✓	✓ (9.1E04)	✓	✗	✗	✓	✗
	OpenEdge 10.0B	✓	✓ (10.0B05)	✓	✗	✗	✓	✗
	OpenEdge 10.1B OpenEdge 10.1C	✓	✓	✓	✗	✗	✓	✗
✓ 5.0.7 ⁽¹⁾	Supported configuration with listed restrictions				✗	Unsupported configuration		
	JVM 1.3.1_10 and OSRCompat Binary Compatibility Module (BCM) 8.0.1 and Update Pack 3 installed by default on OpenServer 5.0.7							

- I. AIX Limitations: Connecting to a Web Service from AIX 5L 5.3 causes the following error:
SYSTEM ERROR: Memory violation. (49)
Bug reference is 20051114-017. Solved by upgrading to AIX 5.3.03 or higher. To determine the level of OS the following UNIX command can be used: > oslevel -r

- J. SQL Client and RDBMS Connectivity: 10.1A and above are forward/backward compatible.

Notes on Platforms and Products (continued)

- K. Windows & Workgroup RDBMS:
Microsoft Windows Home and Professional editions are for OpenEdge 10 Client and Development products only with the following exception: The OpenEdge Workgroup RDBMS product is supported under the MS Windows XP Professional operating system.
- L. ODBC Driver Availability (UNIX & Linux):
The 'ODBC supplement' download files are located under the '10.1x SQL Client Access' area which is located under the 'Progress® Deployment Components' section of the Progress Software ESD download center.
All listed 64Bit ODBC Drivers are physically 32Bit based but that have been certified to run against 64Bit OpenEdge RDBMS instances.
- M. Microsoft SQL Server 2005 (MSS-2005):
Certification of the OpenEdge 10 DataServer product relies on specific ODBC Drivers. The following table details the necessary ODBC Drivers for MSS-2005 support:

ODBC Driver Details [Name & Version (Vendor - File-name)]	OpenEdge Edition certified to run against MSS-2005 via the listed ODBC Driver			
	10.1A	10.1B	10.1C	Availability
OpenEdge 10.1A ODBC Wire Protocol driver for MS SQL Server version 5.10.00.03 (DataDirect Technologies - P1MSSS21.DLL)	✓	✓	✓	Distributed via the OpenEdge 10.1A DataServer for MSS product
SQL Server version 2000.85.1117.00 (Microsoft Corporation - SQLSRV32.DLL)	✓	✓	✓	Distributed by the Microsoft Corporation
SQL Native Client version 2005.90.1399.00 (Microsoft Corporation - SQLNCLI.DLL)	✗	✓	✓	Distributed by the Microsoft Corporation
OpenEdge 10.1C ODBC Wire Protocol driver for MS SQL Server version 5.30.00.54 (DataDirect Technologies - P1MSSS23.DLL)	✗	✗	✓	Distributed via the OpenEdge 10.1C DataServer for MSS product
✓ Supported ODBC Driver to run Dataserver Technology against MS SQL Server 2005 -				
✗ Non supported ODBC Driver to run Dataserver Technology against MS SQL Server 2005				

MS SQL Server 2005 guidelines:

- Due to RDBMS changes in MSS-2005 the current commercial OpenEdge DataAdmin DataServer utilities will reference unnecessary RDBMS SYS objects during a schema holder 'pull'. These SYS objects can be manually deselected or automatically filtered out via enhanced DataAdmin DataServer utilities available via:
 - For OpenEdge 10.1A Please download Service Pack 10.1A.01
- Ensure that MSS-2005 RDBMS SNAPSHOT isolation is turned OFF in order to maintain the DataServers pessimistic locking behavior.
- If using the MS SQL Server Native ODBC Driver the READ UNCOMMITTED ODBC isolation connection setting must be used (DataServer Startup parameter -Dsrv txn_isolation,1). It has been found that the READ COMMITTED Isolation level of MS SQL Server 2005 is not consistent with previous MS SQL Server editions.
- It has been found that in some situations the MS SQL Server 2005 query optimizer is using Table-level locks instead of Row-level locks. This behavior is a regression over the MS SQL Server 2000 query optimizer. An incident-report has been filed with Microsoft. If when running against MSS-2005 your application exhibits excessive record lock contention, it is recommended to place the Database instance in to MS SQL Server 2000 'Compatibility Mode'.
DataServer based workarounds to this change in SQL Server optimizer behavior are being investigated.

- N. ABL access to Web Services: The ability for the ABL to access Web Services is not currently available on the following platforms: Linux x86 64Bit, Linux for POWER PC, and SCO UnixWare.

- O. OpenEdge/Fathom Management & B01 Service Pack incompatibilities: OpenEdge/Fathom Management users need to be aware that the installation of any of the following B01 based Service Packs will cause the functionality of remote database monitoring to fail.
- o OpenEdge 10.1B01 and above
 - o OpenEdge Management 3.1B01 and above
 - o OpenEdge Replication 10.1B01 and above

The OpenEdge B01 (and above) Service Packs contain updates to the OpenEdge/Fathom Management product line that affects the monitoring of remote Progress & OpenEdge RDBMS databases that are not running with the same level of Service Pack. If you install any B01 Service Pack (or above) to a OpenEdge/Fathom Management Console deployment then to maintain remote monitoring functionality you must either install an appropriate B01 (or above) Service Pack onto the remote environment or for older remote 10.1A, 10.0B and V9.1E environments, special Hotfix patches are available via the Progress download center (ESD www.progress.com/esd). The Hotfix patch numbers are 10.1A0221, 10.0B0534 and 9.1E0420 for all supported platforms.

- P. OpenEdge on Vista:
Vista support starts with OpenEdge in 10.1B03. This support does not include OpenEdge Management. Due to Vista's new security model, be sure to read the OpenEdge Release Notes to help you work around Vista Specific issues.

Vista editions and OpenEdge:
Home Basic - NOT Supported
Home Premium - NOT Supported
Business - Supported
Enterprise - Supported
Ultimate – Supported

Q. Windows Installer 3.1 is a prerequisite to doing the install.

Notes on Linux

- General Linux Coverage: The Linux Operating System supports the following hardware platforms (beginning May 2005):
 - Intel x86 (32bit) ^(NB)
 - AMD64 (64Bit) ^(NB)
 - Intel EM64T (64Bit) ^(NB)
 - Itanium Processor Family
 - IBM zSeries (64Bit)
 - IBM S/390 (31Bit)
 - IBM on POWER (IBM iSeries 64Bit) ^(NB)

^(NB) Linux environments supported by OpenEdge

To support the seven different Linux platforms, there are an indeterminate number of Linux distributions in the market. Customers have consistently asked for stability, better performance, and reliability of the Linux platform as well as enterprise-class support. Progress Software cannot be effective in servicing customers if we attempt to support a large number of different Linux distributions. It is our intent is to support a selected set of distributions that have long lifecycles and that are well supported by the distributors and their partners. The primary Linux distributions to be supported are those from Red Hat and Novell SUSE (Enterprise editions only).

The Support for the Turbo Linux Enterprise distribution has been terminated in OpenEdge 10.1A

- Patches and Updates: Commercial updates are not automatically certified, Progress Software relies on the Operating System vendor, to guarantee binary compatibility between their updates and kernel versions.
- Linux environment details: Support of the Network File System (NFS) protocol version 3 (NFSv3) under the Linux Intel x86 platform for Progress OpenEdge products, in particular the support of RDBMS files (physical and recovery) on a NFS partition, requires updates and features found within the 2.4.21 Linux Kernel and OpenEdge Service Packs. Network File System (NFS) protocol versions NFSv2 and NFSv4 under Linux have not been certified and are therefore unsupported.
- rPATH
 - 32-bit:** rPATH Linux Release 1 certification of OpenEdge 10.1B 32-bit. Please note that customers wishing to use this must run the following command to use OpenEdge 10.1B:

```
# conary update compat-libstdc++-gcc296=addons.rpath.com@rpl:1
```

When OpenEdge 10.1C is released, customers will not longer need to run this command to use OpenEdge.
 - 64-bit:** rPATH Linux Release 1 certification of OpenEdge 10.1B 64-bit. Please note that customers wishing to use this must run the following command to use OpenEdge 10.1B:

```
conary update libstdc++=conary.rpath.com@rpl:1-compatible --keep-existing
```

When OpenEdge 10.1C is released, customers will not longer need to run this command to use OpenEdge.
- Red Hat 4.0 Support requires the following Red Hat backwards compatibility libraries, available via the Red Hat 4.1 update package:

```
compat-libstdc++-296-2.96-132.7.2
compat-libstdc++-33-3.2.3-47.3
```

Notes on Third Party Products

- In all installations with Crystal, the Crystal-to-Progress data connection is via the OpenEdge 10 ODBC driver (Data Direct 4.1 ODBC driver).
- General: 32-bit Products are supported on operating systems that can either sustain 32-bit or 64-bit kernel modes.
- For a complete compatibility matrix of Tugboat and OpenEdge releases, please refer to the following on-line document:
<http://roundtable-tsms.com/pdf/CompatibilityMatrix.pdf>
- Business Objects ODBC connectivity matrix:

Business Objects Product	Progress & OpenEdge Versions			
	Progress 8	Progress 9	OpenEdge 10	OpenEdge 10.1
Crystal 9	Progress 8.3E using ODBC SQL-89 with CR90DBEXWIN_EN.ZIP	Progress 9.1D using ODBC SQL-92 with 4.1 SP6 or higher update	OpenEdge 10 and above using ODBC SQL-92 with 4.2 driver	OpenEdge 10.1 and above using ODBC SQL-92 with 5.1 driver
Crystal 10	Not supported	Progress 9.1D using ODBC SQL-92 with 4.1 SP6 or higher update OR Progress 9.1D using ODBC SQL-92 with Crystal 10 DBEX10WIN_EN.ZIP hotfix	OpenEdge 10 and above using ODBC SQL-92 with 4.2 driver	OpenEdge 10.1 and above using ODBC SQL-92 with 5.1 driver
Crystal XI	Not supported	Progress 9.1E02 using ODBC SQL-92	OpenEdge 10 and above using ODBC SQL-92 with 4.2 driver	OpenEdge 10.1 and above using ODBC SQL-92 with 5.1 driver
Crystal XI R2	Not supported	Progress 9.1E02 using ODBC SQL-92	OpenEdge 10.0B02 using ODBC SQL-92	OpenEdge 10.0B02 using ODBC SQL-92 with 5.1 driver

- Third Party Product Lifecycle
Third-party products are governed by the product lifecycle policies established by the vendor.
For convenience, we document product lifecycle information for third-party products sold through Progress:

Business Objects Business Objects lifecycle policy: <http://support.businessobjects.com/programs/lifecycle>

- Major releases supported for 36 months; telephone support provided for 6 additional months
- Minor releases supported for 12 months while major release is active
- Customers using Crystal Reports 9 should migrate to Crystal Reports XI.

OpenEdge Feature and Functionality obsolescence life cycle

The OpenEdge platform has a well-defined life cycle at the product (packaging) level. Products can have one of four life cycle statuses: Active, Functionally Stable, Mature and Retired¹. Such a life cycle is appropriate for major releases of products. It is necessary, however, to have a finer level of granularity independent of the product life cycle which addresses the feature or functionality level. This includes operating system as well as features. Features and functionality move through various phases from commercial introduction to obsolescence. As features become obsolete, they are handled one of two ways: They can be *Deprecated* or *De-Supported*.

Definition of Deprecation: *Features/Functionality is identified as obsolete, but not removed from the supporting technology*

Definition of De-Support: *Features/Functionality identified as obsolete, and removed from the supporting technology.*

For example, the English Language, like computer software, is ever evolving and certain 'olde' words drop out of fashion and are replaced. These 'olde' words are never removed but deprecated and may not be recognized by modern-day spell and grammar checkers, although they are still commonly understood, while de-support of the phrase 'couch potato' has been requested by a number of potato farmers due to the negative image the term portrays, with the hope that this term drops out of dictionaries and usage.

The backward compatibility of OpenEdge-based applications and deployments are some of the key factors in determining if obsolete features can be *Deprecated* or *De-Supported*.

Typically OpenEdge language features are deprecated to ensure the support of existing applications where as de-support is used for functionality where the loss does not force application re-work.

Benefits of the Deprecated and De-Support lifecycles phases include:

- Set appropriate customer's expectations regarding backwards/forwards compatibility
- Give customers sufficient time to consider and plan changes in their applications
- Promote rejuvenation and upkeep of applications, advantageous to partners and customers
- Better alignment with non OpenEdge technology partners such as Operating Systems vendors
- Encourage customers to use modern replacement features as appropriate

Deprecated Features and Functionalities:

Deprecation provides the ability to identify, communicate and manage obsolescence (and the possible eventual de-support) of features and functionality, independent of the products and versions in which they may be included and how are they packaged.

Progress' recommendation is that deprecated features should no longer be used. Customers should consider substituting deprecated features over time with the newer replacement ones. Please note that:

- Deprecated features continue to function.
- Limited basic support will be available for deprecated features and functionalities.
- Deprecated features will not include further enhancements
- Communications will follow the 'Obsolescence Life Cycle Guidelines' as described below

De-Supported Features and Functionalities

De-support is used where changes in technology or standards have made a feature obsolete and it is removed from the OpenEdge product. De-supported features have replacement equivalents and have zero impact on backwards compatibility.

Key details of De-Support include:

- OpenEdge dependant features will be removed, such as RAW partition support.
- Third Party dependant features, such as platform support may continue to function
- There will be no Limited basic support for de-supported features
- Communications will follow the 'Obsolescence Life Cycle Guidelines' as described below

Obsolescence Life Cycle Guidelines:

The following are the phases for the deprecation or de-support life cycle of features as they become obsolete:

- Prior to assigning one of the obsolescence statuses, features that are candidates for deprecation or de-support will be published to partners and customers for comment, potentially polling for information on the impact that the deprecation or de-support may cause to current applications.
- OpenEdge Product Management will use the information gathered from this process to assess the obsolescence of each feature or functionality.
- Details about de-supported and deprecated features will be included in this *OpenEdge Platforms and Products Availability Guide*
 - Announcements will be made to inform the Progress community of updates to features' status.
 - Deprecated and de-supported features will be identified as such in the Product Documentation.

Deprecated Features and Functionality List

The following table contains the current list of deprecated features and operating systems for OpenEdge 10. Timeframe details are published to help partners and customers with their planning. We recommend substituting obsolete functionality with appropriate equivalents as indicated in the following table.

Deprecated Feature or Functionality	Replacement Feature	Deprecation Information	
		Announced OpenEdge version	Notes
SQL in 4GL	4GL	OpenEdge 10.0A	SQL statements in 4GL code require the Progress V9 SQL-89 product. The SQL-89 interface is obsolete.
CHOOSE statement	Selection lists, Data browsers	OpenEdge 10.1A	Selection lists and data browsers are available on ChUI and GUI (Windows desktop); the functionality of the CHOOSE statement has been superseded by the new constructs, easier to use and with additional, more complete built-in behaviors.
EDITING clause in UPDATE, SET PROMPT-FOR	WAIT-FOR	OpenEdge 10.1A	EDITING blocks were required for ChUI procedural applications, prior to event-driven programming which provides much more flexibility, additional functionality and that are easier to learn by users. EDITING blocks are not appropriate for event-driven, multi-tier or Service-Oriented applications
GATEWAYS statement	DATASERVERS	OpenEdge 10.0A	GATEWAYS was an early term (V6) to refer to DataServers. The term was fully replaced by DATASERVERS, which provides identical functionality.
GO-PENDING statement	See notes	OpenEdge 10.1A	Dependency with EDITING
IS-ATTR-SPACE statement	Obsolete, not needed	OpenEdge 10.0A	ATTR-SPACE hardware terminals have been long ago superseded. They are not available, nor used anymore. IS-ATTR-SPACE adds product maintenance costs and backwards compatibility requirements not required by the market anymore.
PUT SCREEN statement	DISPLAY	OpenEdge 10.0A	This features has become obsolete, and will not be enhanced. If needed, its functionality can be achieved with the DISPLAY statement.
SCROLL statement	See CHOOSE	OpenEdge 10.1A	See CHOOSE
Open Client ActiveX	Open Client. NET	OpenEdge 10.0A	Refer to the Open Client ActiveX statement of direction available on PSDN (http://psdn.progress.com/index.ssp)
RECID	ROWID	10.1B (this entry was posted on May 17 2006)	Supported mainly for backward compatibility. For most applications, use the ROWID function, instead. Excerpts from the Product Documentation: “ROWID function replaces the RECID function for most applications. However, you must use the RECID function for maintaining schema objects (file and field relationships) in the Progress metaschema files.” NOTE: As with all deprecations, current RECID support and related ABL functionality remains ‘as is’. No future RECID functionality enhancements are planned.
WORKFILES / WORKTABLES	ABL Temp-Tables	10.1B (this entry was posted on June 26 2006)	It is recommended to use ABL Temp-Tables or ProDataSets
PROMPT-FOR (this feature will be removed from this deprecated feature list)	SET or UPDATE	10.1B (this entry was posted on June 26 2006)	It is recommended to use the SET and UPDATE ABL commands in place of the PROMT-FOR statement Aug 6 2006 Update - PROMPT-FOR removed as ENABLE and WAIT-FOR are only viable alternatives for event-driven applications
DDE	Use Microsoft’s Component Object Model (COM)	10.1B (this entry was posted on June 26 2006)	Dynamic Data Exchange (DDE). Use Component Object Model (COM) instead. See product documentation: OpenEdge Development: Programming Interfaces
WIDGET-HANDLE	HANDLE	10.1B (this entry was posted on June 26 2006)	There is absolutely no difference between WIDGET-HANDLE and HANDLE

De-Supported Features and Functionality List

The following table contains the current list of de-supported features and operating systems for OpenEdge 10. Timeframe details are published to help partners and customers with their planning. We recommend substituting obsolete functionality with appropriate equivalents as indicated in the following table.

De-supported Feature or Functionality	Replacement Feature	De-Support Information		
		De-support Scheduled For	Notes	Status
RAW PARTITION support for database files	OS File System storage	OpenEdge 10.1A	Substitute with FILE-SYSTEM extents. With 10.1A, the RAW-PARTITION RDBMS extents are not supported.	Completed
OpenEdge DataServer for Oracle for HP UX 32-bit	None	OpenEdge 10.1C	Oracle is no longer selling the DataServer for the HP UX 32-bit platform	Completed
Windows 2000 Professional SP4	Windows 2003 (SP1)	OpenEdge 10.2A	Windows 2000 http://support.microsoft.com/lifecycle/?LN=en-us&x=10&y=6 ■ General Availability: March 31, 2000 ■ Mainstream support retired: June 30, 2005 ■ Extended support retired: July 13 2010	Ongoing
DB2 UDB 7.2 (MVS, RS/6000,NT)	DB2 UDB 8.1 or above	OpenEdge 10.2A	■ General Availability: June 8, 2001 ■ End of support: September 30, 2004 http://www-306.ibm.com/software/support/lifecycle/index_a_z.html#D	Ongoing
Windows 2000 Server SP4	Windows 2003 (SP1)	OpenEdge 10.2A	Windows 2000 http://support.microsoft.com/lifecycle/?LN=en-us&x=10&y=6 ■ General Availability: March 31, 2000 ■ Mainstream support retired: June 30, 2005 Extended support retired: July 13 2010	Ongoing
AIX 5L v5.2 + maintenance update 1 + patch IY43963	AIX 5L 5.3	OpenEdge 10.2A	IBM AIX 5L v5.2 (current build platform for OE 10) (http://www-306.ibm.com/software/support/lifecycle/index_a_z.html#J) • General Availability: 18 Oct 2002 • End of Full Support: 30 Sep 2008	Ongoing
HP-Compaq Tru64 Operating System	HP-UX PA-RISC HP-UX Itanium	Next major release after OpenEdge 10.1A	In consultation with Hewlett-Packard, OpenEdge 10.1A will be the last release to support Tru64 UNIX. http://h30097.www3.hp.com/tru64_planning.html June 26 2006 Update: Due to customer demand, it is planned that the upcoming OpenEdge 10.1B release will be the last supported edition for the Tru64 platform.	Completed
Oracle 8i support (DataServer for Oracle)	Oracle 10g	OpenEdge 10.2A	Oracle 8i life cycle summary: -Error Correction Support (ECS): 31-DEC-2004 -Extended Support (ES): 31-DEC-2007 -Extended Maintenance Support (EMS): 31-DEC-2006	Ongoing
Informix support (DataServer for ODBC)	None	OpenEdge 10.1A	The embedded ODBC drivers which ship with the OpenEdge DataServer for ODBC will no longer include the Informix ODBC drivers - No current OpenEdge 10.0B DataServer functionality will be removed.	Completed

MS SQL Server 7 (DataServer for MS SQL Server)	MS SQL Server 2000 or MS SQL Server 2005	OpenEdge 10.1A	Mainstream Microsoft support for SQL Server 7.0 will end on March 31, 2004, with extended support wrapping up March 31, 2006	Completed
Support for Red Hat Enterprise Linux AS 2.1 and 3.0	Linux x86 Red Hat 4.0	OpenEdge 10.1C	March 2007 update: Deployment Support for RH EL 2.1 has ended and will end in July 2007 for RH EL 3.0 – OpenEdge build platforms are targeted for platforms that have active maintenance. https://www.redhat.com/security/updates/errata/	Completed
Crystal Reports Professional Version 9	None	April 1, 2007	March 2007 update: Release alignment with businessobjects.com http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Completed
Crystal Reports Developer Version 9	None	April 1, 2007	March 2007 update: Release alignment with businessobjects.com http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Completed
Crystal Reports Advanced Version 9	None	April 1, 2007	March 2007 update: Release alignment with businessobjects.com http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Completed
Report Application Server (RAS) Version 9	None	April 1, 2007	March 2007 update: Release alignment with businessobjects.com http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Completed
WebGarden RDC Expansion Version 9	None	April 1, 2007	March 2007 update: Release alignment with businessobjects.com http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Completed
Crystal Reports 6CPL add-on Version 9	None	April 1, 2007	March 2007 update: Release alignment with businessobjects.com http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Completed
Crystal Enterprise Professional - 1 User Version 9	None	April 1, 2007	March 2007 update: Release alignment with businessobjects.com http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Completed
Crystal Enterprise Professional -CPU Version 9	None	April 1, 2007	March 2007 update: Release alignment with businessobjects.com http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Completed
CE Smart Reporting add-on 1 User Version 9	None	April 1, 2007	March 2007 update: Release alignment with businessobjects.com http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Completed
WebGarden RDC Expansion	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing
Crystal Enterprise Express	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing
CE Embedded half-CPU (formerly 6CPL add-on)	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing

CE Embedded full-CPU (formerly RAS)	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing
Crystal Enterprise Professional	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing
CE Explorer add-on (formerly Smart Reporting)	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing
CE Auditor add-on	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing
CE Report Distribution License	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing
Crystal Enterprise Premium	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing
Crystal Reports Professional	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing
Crystal Reports Developer	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing
Crystal Reports Advanced	XI	December 2008	http://support.businessobjects.com/programs_and_lifecycle/lifecycle/crprodsuites.asp	Ongoing
