

OpenEdge® 11 Platform & Product Availability Guide

Current version: September 27, 2016

Previous version: August 19, 2016

Introduction

The OpenEdge® Platform & Product Availability Guide reflects the current commercial releases for Progress Software's OpenEdge 11 products. This document does NOT address unannounced future product release plans. The information contained in this document is updated on a regular basis and is subject to change without notice.

For platform and product information relating to earlier Progress/OpenEdge releases please go to the Platform Availability Guide homepage on Progress Communities:

[https://community.progress.com/technicalusers/w/openedgegeneral/1501.openedge-life cycle-and-platform-availability-guide.aspx](https://community.progress.com/technicalusers/w/openedgegeneral/1501.openedge-life-cycle-and-platform-availability-guide.aspx)

Update Summary (new content indicated by **red text** within the document):

1. Added support for RHEL6.7/CentOS7.0 versions on MS Azure cloud for OE11.6
 2. Added Java Certification Policy for OpenEdge releases
 3. Corrected Cloud certifications matrix
 4. Added De-support information for OpenEdge DataServer for ODBC

| | | | | | CentOS 7.0 (64-bit) ¶¶ | ✓ | ✓ |

*Beginning with OpenEdge 11.1, the JDK is embedded in every platform. Previously it was embedded only in Windows and Solaris.

†To run the 32-bit OpenEdge product on a Red Hat Enterprise Linux 6.x operating system, you must first install the libstdc++-4.4.4-13.el6.i686.rpm RPM, which can be found on the Red Hat installation media.

‡If using IPV6 with OpenEdge on a Red Hat Enterprise Linux 6.x operating system, you will need to add -agenthost 0::0 to the agent connection string (srvrStartupParam) in the ubroker.properties file. This forces a specific Application Server and all of its agents to communicate only with IPV6. If you have a mixed environment of IPV4 and IPV6, you will need to have dedicated Application Servers for each protocol version.

**Java 1.7 is certified for OpenEdge 11.2 and higher with the exception of PDS for OpenEdge, which is certified for Java 1.7 on OpenEdge 11.3 and higher. For OpenEdge 11.0 and 11.1, Java 1.6 is certified. For the HP PA-RISC platform only, Java 1.7 is unavailable. Note that for OpenEdge 11.2, the one exception to Java 1.7 certification is Progress Developer Studio for OpenEdge (PDS for OpenEdge). PDS for OpenEdge for OpenEdge 11.2 is still certified only for Java 1.6.

*** There were a couple of issues observed during the certifications of OpenEdge 11.3.2 32-bit / 64-bit on Windows 8.1 and Windows Server 2012 R2. Please refer to these Knowledge Base (KB) articles for corresponding workarounds.

<http://knowledgebase.progress.com/articles/Article/000050181>

<http://knowledgebase.progress.com/articles/Article/000050182>

¥¥ There were a couple of issues observed during the certifications of OpenEdge 11.3.2 32-bit / 64-bit on Ubuntu 12.04.4 LTS 64-bit. Please refer to this KB article for corresponding workarounds.

<http://knowledgebase.progress.com/articles/Article/000055418>

☐☐ There were a couple of issues observed during the certifications of OpenEdge 11.3.2 and OpenEdge 11.4 32-bit / 64-bit on RHEL 7.0 and 64-bit on CentOS 7.0. Please refer to this KB article for corresponding workarounds.

<http://knowledgebase.progress.com/articles/Article/000056050>

◆ There were a couple of issues observed during the certifications of OpenEdge 10.2B08, OE11.3.3, OE11.4, OE11.5.1 and OE11.6 on Windows 10 32/64-bit. Please refer to this KB article for corresponding workarounds.

<http://knowledgebase.progress.com/articles/Article/Is-Windows-10-supported-with-OpenEdge>

§§ There were a couple of issues observed during the certifications of OpenEdge 10.2B08, OE11.3.3, OE11.5.1 and OE11.6.2 on AIX6.1/7.1 running on Power8. Please refer to this KB article for corresponding workarounds.

<http://knowledgebase.progress.com/articles/Article/Does-OpenEdge-support-AIX-on-Power8>

HP-UX PA-RISC Certification

The following platform information is only applicable for OpenEdge 11.0, OpenEdge 11.1 and OpenEdge 11.2 on HP-UX PA-RISC:

| OS Vendor | CPU Architecture | Port Code | JDK* | Compiler | Certification Platforms (Version numbers are the minimum certified) | OpenEdge | |
|-----------|---------------------------------|-----------|------------|----------|--|----------|--------|
| | | | | | | 32-bit | 64-bit |
| HP | HP-UX 11i v3 64Bit (PA-RISC) | 0036 | 1.6.0.07** | aCC 3.90 | HP-UX 11i v3 (Build platform) | | ✓° |

°Support for the HP PA-RISC platform is discontinued beginning with OpenEdge 11.3. This de-support impacts only OpenEdge 11.3 and higher. Support for HP PA-RISC will continue on all prior releases where it already exists, including OpenEdge 10.x, OpenEdge 11.0, OpenEdge 11.1, and OpenEdge 11.2.

Java 8 Runtime Certification

Java8 Runtime is supported on all OpenEdge 11.6 supported platforms. Please refer to the below kbse article for the supported version details and other important information.

<http://knowledgebase.progress.com/articles/Article/Does-OpenEdge-Support-Java8-Runtime-for-OE11-6>

OpenEdge 11 Cloud Certifications

| Cloud Technology | Supported Platforms (version numbers are the minimum supported) | 32-bit | 64-bit |
|------------------|---|--------|--------|
| Amazon EC2 | CentOS 5.2 and above | ✓ | ✓ |
| | Windows 2003 R2 | ✓ | ✓ |

| | | | |
|-----------|------------------------|---|---|
| | Windows 2008 R2 | ✓ | ✓ |
| | RedHat 5.4 | ✓ | ✓ |
| | RedHat 6.1 | ✓ | ✓ |
| | Linux AMI 2012.03.3 | ✓ | ✓ |
| HP Helion | CentOS 6.5 | ✓ | ✓ |
| | Windows Server 2012 R2 | ✓ | ✓ |
| MS Azure | RHEL6.7 | ✓ | ✓ |
| | CentOS7.0 | ✓ | ✓ |

There were a couple of issues observed during certifications of OpenEdge 11.5 32-bit / 64-bit on HP Helion cloud. Please refer to this KB articles for corresponding workarounds:

<http://knowledgebase.progress.com/articles/Article/HP-Helion-cloud-What-are-the-pre-requisites-before-working-with-OpenEdge-11-5-64-bit-installed-on-CentOS-6-5-64-bit>.

There were a couple of issues observed during certifications of OpenEdge 11.6 32-bit / 64-bit on RHEL6.7/CentOS7.0 hosted on MS Azure cloud. Please refer to this KB articles for corresponding workarounds:

<http://knowledgebase.progress.com/articles/Article/How-to-install-OpenEdge-on-Azure-Cloud-when-root-access-is-disabled>

Product Life Cycle Status and Schedule

Product life cycle (Active, Mature, Retired) information can be found on Progress Community. Please follow this link to the latest information: [Progress Community Availability and Life Cycle](#).

^a Beginning with OpenEdge 11.3, native Windows 64-bit support is extended to include the complete Windows Client, including the GUI runtime, Progress Developer Studio for OpenEdge (PDS for OpenEdge), and ADE Tools. The exception is the WebClient which will have native 64-bit Windows support in a later release.

Notes on 64-bit Microsoft Windows GUI Support on OpenEdge

For additional programming-related considerations please see the ABL Reference for OpenEdge 11.3. *These differences are all permanent unless otherwise noted.*

- **ProTools** The OpenEdge 64-bit Windows GUI Client does not support the following ProTools: Screen Capture, ProSpy Plus, and XML Schema Mapping.
- **AppBuilder** For the Structured Procedure object, you can create a structured procedure and use the Section Editor to modify it, however this is no tree view available in the structured procedure's window.
- **AppBuilder** For WebSpeed Remote Development, you can use the WebSpeed development tools with a local Web server, but not with a remote Web server on another system.
- **OCX's** included with OpenEdge The pstimer.ocx is the only 64-bit OCX control shipped with OpenEdge 11.3. The following OCX controls are no longer supported in the OpenEdge 64-bit Windows GUI Client: cscmb32.ocx, cslst32.ocx, and csspin32.ocx.
- **Applications** utilizing third-party OCX controls If an application includes third-party OCX controls, it is necessary to use a 64-bit version of the control on the OpenEdge 64-bit Windows GUI Client. Developers should contact the OCX provider to determine whether a 64-bit version of the control is available.
- **"Bit-ness"** for OCX and DLL files must match the "bit-ness" of the Windows O/S. E.g., 32-bit OCX files are supported only on the 32-bit Windows O/S, and 64-bit DLL's are supported only on the 64-bit Windows O/S.
- **Image file types** The OpenEdge 64-bit Windows GUI Client supports only the following image file types:
 - BMP (Windows Bitmap)
 - GIF (Graphics Interchange Format)
 - ICO (Microsoft Icon File Format)
 - JPEG (Joint Photographic Experts Group)
 - PNG (Portal Network Graphics)
 - TIF (Tag Image File)
- **TranMan** The screen capture facility in TranMan is not supported on the OpenEdge 64-bit Windows GUI Client.
- **Progress.ini** settings The UseNative3D and UseSourceEditor settings are ignored or unavailable when using the OpenEdge 64-bit Windows GUI Client.
- **Report Engine** The Report Engine has not been ported to 64-bit Windows. The 32-bit Report Engine continues to ship with any product that includes the Report Engine.
- **Progress Dynamics** - Progress Dynamics is not supported in OpenEdge 64-bit.

Progress Developer Studio (PDS) for OpenEdge

The table below summarizes component versions within PDS for OpenEdge.

| OpenEdge Release | Eclipse (Shipped) | Eclipse (Supported) | XML Version | .NET Framework | JVM Version |
|------------------|-------------------|---------------------|-------------|----------------|-------------|
| 11.6.2 | 4.3.1 | - | 3.5.1 | 4.0 | 1.7.0_45 |
| 11.6.1 | 4.3.1 | - | 3.5.1 | 4.0 | 1.7.0_45 |
| 11.6 | 4.3.1 | - | 3.5.1 | 4.0 | 1.7.0_45 |
| 11.5.1 | 4.3.1 | - | 3.5.1 | 4.0 | 1.7.0_45 |
| 11.5 | 4.3.1 | - | 3.5.1 | 4.0 | 1.7.0_45 |
| 11.4 | 4.3.1 | - | 3.5.1 | 4.0 | 1.7.0_45 |
| 11.3 | 3.7.1 | 3.8.0 | 3.3.1 | 4.0 | 1.7.0_02 |
| 11.2.1 | 3.7.1 | 3.8.0 | 3.3.1 | 4.0 | 1.6.0_27 |
| 11.2 | 3.7.1 | 3.8 | 3.3.1 | 4.0 | 1.6.0.27 |
| 11.1 | 3.6 | 3.7.1 | 3.2 | 4.0 | 1.6.0.27 |
| 11.0 | 3.6 | - | 3.2 | 4.0 | 1.6.0.27 |

Tomcat Web Server

As an OpenEdge Web Server

Progress Software does certify that Web Server and Servlet Engines must be JSE-compliant with the Java Servlet interface Version 2.3. In addition, Progress Software does **not** provide the Web Server and/or Servlet Engine except when used with Progress Application Server (PAS) for OpenEdge, and tests AIA and WSA using Servlet Exec, JRun, and Tomcat. Any current JSE (even those not tested) should work with Progress OpenEdge as long as the Java Servlet Engine adheres to Sun/Oracle Java Servlet specification Version 2.3 and is compatible with a Web Server.

Please refer to these Knowledge Base (KB) articles for additional information:

<http://knowledgebase.progress.com/articles/Article/P186395>

<http://knowledgebase.progress.com/articles/Article/P71131>

<http://knowledgebase.progress.com/articles/Article/P77167>

With Progress Application Server (PAS) for OpenEdge

The table below lists the Tomcat versions supplied with and supported by PAS for OpenEdge.

| OpenEdge Release | Tomcat Version |
|------------------|----------------|
| 11.6.2 | 7.0.65 |
| 11.6.1 | 7.0.65 |
| 11.6 | 7.0.62 |
| 11.5 | 7.0.55 |

Upcoming OpenEdge Certifications

The list of ongoing or upcoming certifications of OpenEdge 11.x is listed here for the informational purposes only. The delivery of the certifications may change without further notice according to the execution and /or change in priorities and hence they are not guaranteed for delivery. OpenEdge releases listed are for certification purposes and may not reflect the actual order of certification/porting.

- Java version upgrade to Java8 in OE11.7
- .Net 4.6x support in OE 11.7
- ESXi 6.x certification for OE 11.6.x
- Windows 2016 Server certification for OE 11.6.x
- SUSE 12 64-bit for OE 11.6.x
- Ubuntu 16 LTS 64-bit for OE 11.6.x
- Sun Solaris Sun Cluster 4.3 for OE 11.6.x
- Certification of Windows 2012 R2 failover cluster for 11.6, 10.2B, 11.3, 11.5
- Certification of OpenEdge 11.5/OE11.6 on CentOS Linux 6.5

Upcoming Platform changes

- 32-bit version of OpenEdge on Linux platforms will be discontinued from OE11.7 onwards.
- Linux 6.6 is the base OS level for Linux 64-bit platform from OE11.7 onwards.

Windows XP and Windows 2003 Retirement

OpenEdge 11.6 is the last release that Progress OpenEdge will support Windows XP and Windows 2003. Both of these products have been retired by Microsoft. For additional information please refer to the Microsoft web site.

OpenEdge Java certification policy

To help customers adopt more recent versions of Java, the Java certification process for OpenEdge platform will be categorized into shipped and certified versions of Java. To obtain latest Java platform support, customers are encouraged to adopt and work with active OpenEdge releases.

NOTE: The following Java support policy and guidelines apply for all active OpenEdge releases. Additional details about OpenEdge Product lifecycle can be obtained in [Product lifecycle guide](#). Please also note that this policy does NOT apply to any OpenEdge mature or retired versions. This Progress Product Availability Guide (PAG) details Java support for mature/retired releases of the OpenEdge platform and any additional Java certifications for OpenEdge mature releases is completely at the discretion of Progress Software.

1. Aligning OpenEdge releases with third party software (e.g. Java) is extremely challenging due to timing and stability issues with different software vendors and their lifecycle policies. To enable Progress Software customers to keep up with the latest version of Java, Progress will make every effort to certify a newly released Java minor version (e.g. 1.7 or 1.8) within 6 to 8 months of the Java release. PAG will note the shipped and certified version of Java. e.g. OpenEdge 11.6 release ships with Java 1.7.0_45 and while certifies with Java 1.8.0_xx.

2. As in the past, all OpenEdge major and minor releases will continue to ship with a recent version of Java. Progress Software will make a reasonable effort to ship each new major or minor OpenEdge release (e.g. 11.0, 11.1, 11.2 etc...) with a recent minor version of Java that was released within the last 12 to 18

months prior to the first availability of the OpenEdge release. The shipped version of Java is the default Java version and will continue to be supported throughout the lifecycle of the OpenEdge release. PAG will detail the shipped version of Java. E.g. OpenEdge 11.6 release ships with Java 1.7.0_45 and will be supported thru' the lifecycle of OpenEdge 11.6.

3. With the exception of HP-UX and AIX platforms and unless otherwise explicitly noted in PAG, most recent Java patches (e.g. xx – in Java 1.7.xx) of a shipped or certified version of Java will be supported by default. This policy is based on assumption that Java patches do not alter any existing behavior or functionality. As always customers are strongly advised to test their application functionality before deploying applications with most recent patches of Java in production environment.

Progress reserves the right to update this policy from time to time and encourages you to refer to the PAG for the latest information on Progress Software's OpenEdge Java certification policy.

OpenEdge Pro2 Product Availability by Platform

| Product | Windows 32bit | Windows 64bit | HP-UX 64bit ITANIUM | IBM AIX 64bit | Linux 32bit Intel | Linux 64bit Intel | Solaris SPARC 64bit | Components |
|-------------------------|------------------|------------------|---------------------------|------------------|-------------------------|-------------------------|---------------------------|---------------------------------------|
| OpenEdge Pro2SQL | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | OpenEdge DataServer for MS SQL Server |
| | | | | | | | | Client Networking |
| | | | | | | | | Pro2 v4.6.1 |
| OpenEdge Pro2Oracle | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | OpenEdge DataServer for Oracle |
| | | | | | | | | Client Networking |
| | | | | | | | | Pro2 v4.6.1 |
| OpenEdge Pro2 | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | OpenEdge Enterprise RDBMS |
| | | | | | | | | Client Networking |
| | | | | | | | | Pro2 v4.6.1 |

| | | | | | | | | Client Networking |
| | | | | | | | | Pro2 v4.6.1 |
| OpenEdge Pro2Enterprise | ✓ | ✓ | | | | | | OpenEdge DataServer for MS SQL Server |
| | | | | | | | | Client Networking |
| | | | | | | | | Pro2 v4.6.1 |
| | | | | | | | | OpenEdge DataServer for Oracle |

For additional supported platform information please refer to the OpenEdge DataServers availability section in the Availability by Platform table above.

Notes on Platforms and Products

- Build Platform:** This Operating System edition is used for the compilation and building of the OpenEdge Binaries. Custom binary creation using OpenEdge Build Scripts should be performed using this Operating System.
- Certification:** This Operating System edition has been tested using the binaries created under the “Build Platform”
- Limited:** Certain restrictions apply. Please refer to the “Platforms and Product Notes” chapter for more details.

OS Service Pack / Maintenance Pack Support

Operating System updates are not automatically certified but are supported where the OS vendor guarantees backwards compatibility with the baseline OS level. Certification of OS updates may be performed if the backwards guarantee compatibility of the OS Service Pack / Maintenance Pack is questionable.

A. Failover Cluster Managers certified and supported by OpenEdge 11:

- Microsoft Windows Server 2008 R2 Failover Clusters (64-bit OpenEdge only)
- IBM HA Cluster (HACMP) 5.3
- IBM HA Cluster (HACMP) 5.4.1 with OS AIX 5.3
- IBM HA Cluster (HACMP) 6.1 with OS AIX 6.1
- PowerHA 7.1(HACMP 7.1) with AIX 6.1/7.1
- Sun Solaris Sun Cluster 2.2, 3.0, 3.1, & 3.2
- HP-UX Service Guard 11i (PA-RISC)
- HP-UX Service Guard 11i (Itanium2)

B. Oracle RDBMS Support: Indicates platforms where the Oracle RDBMS product may not be commercially available but the OpenEdge DataServer can be installed to provide client/server access to remote Oracle RDBMS instances. For operating systems that support 32-bit and 64-bit applications, Oracle 12c, Oracle 11g, Oracle 10g and Oracle 9i release 2 are only available as a 64-bit product. The 32-bit based OpenEdge DataServer for Oracle is able to access a 64-bit Oracle Database instance via 32-bit Oracle Client software.

C. OpenEdge & Sonic: Compatibility is documented on the Progress Community:

<https://community.progress.com/technicalusers/w/openedgegeneral/1519.openedge-adapters-for-sonic-platform-support-and-compatibility.aspx>

D. File System Support (NFS, iSCSI, CIFS, ZFS, and Encrypted file systems): No matter which operating system you prefer, there are numerous choices for file systems available, each with different performance characteristics and limitations.

In general, Progress Software does not support or certify specific file systems for use as OpenEdge RDBMS storage. File systems are part of an operating system, just as device drivers are, and are supported by their respective operating system suppliers. If there are bugs or defects, Progress cannot correct them - the operating system supplier is responsible for that. Furthermore, certification testing of any operating system using any file system is done from the standpoint of correct functionality and does not take performance metrics into account. Different file systems may have performance-related side effects that are a by-product of how the file system operates. Users are advised to carry out

extensive acceptance testing and seek vendor guidance when performance issues are observed. Progress Software is unable to assist customers with configuring any file system to manage performance or other characteristics.

The OpenEdge RDBMS works well with most file systems as long as the operating system's file access API is properly implemented and the file system's options are properly configured and the supplier's patches have been applied. Only in very rare instances has Progress Software certified file systems or other storage products for use as OpenEdge RDBMS storage. These were done on an exception basis, usually in cooperation with the respective vendors, and include: Network File System (NFS), which is supported starting with NFS Version 3; NetApp Filers; EMC SRDF; and iSCSI, which is supported beginning with the OpenEdge 10.1A release.

For leveraging UNIX/Linux/Windows Encrypted File Systems, OpenEdge products have no restrictions provided the encryption technology is truly transparent to the Operating System. No formal certification of Encrypted File System Technology is planned. The EFS technology transparently allows files to be stored encrypted on NTFS file systems.

ZFS is the default file system for Sun Solaris 11 and the OpenEdge certification of that operating system was carried out using this default.

XFS is the default file system for RHEL 7.0 64-bit/CentOS 7.0 64-bit and OpenEdge certifications have been carried out using XFS.

- E. Software support policy for Windows Tablet XP 2005: The Microsoft Windows XP Tablet 2005 operating system is a superset of the Windows XP Professional operating system; applications that are compatible with Windows XP Professional also run on Windows XP Tablet 2005 Edition. Progress Software does not guarantee support for Windows Tablet XP 2005 features that are not part of the Windows XP Professional operating system and any issues found with these Tablet XP features relating to Progress Software products, will need to be proven against the Windows XP Professional operating system before contacting Progress technical support. For more details on Windows Tablet XP 2005 features, support and compatibility please refer to the following on-line Microsoft documentation: <http://support.microsoft.com/default.aspx?scid=kb;en-us;327160>
- F. Application Virtualization software support and certification policies: Application Virtualization Software such as Citrix Metaframe, Citrix Presentation Server, HOBLINK, VMware, and MS Windows Terminal Server are products that provide an abstraction layer that decouples the physical hardware from the 'guest' operating system to deliver greater IT resource utilization and flexibility. Progress OpenEdge provides full support with Application Software environments. The versions noted on the list below indicate support for the entire "family" of releases within the version. For example, support for "Citrix XenApp 6.x" extends to all Version 6 releases of XenApp and is not limited specifically to any particular one. With this in mind, here are the minimum supported vendors and versions of virtualization technologies:
- Citrix MetaFrame XPe
 - Citrix XenServer Virtualization (formally known as XenSource) (4.1, 5.5, 5.6 and 6.2)
 - Windows Terminal Server (2003R2)
 - Citrix Presentation Server (3.0 & 4.0 MS Windows)
 - Citrix XenApp 5.x
 - Citrix XenApp 6.x
 - Citrix XenApp 7.x
 - VMware Workstation 5, 6, 7, 8, 9
 - VMware ESX/ESXi 3.5
 - VMware vSphere v4.x (ESX 4.x, ESXi 4.x)
 - VMware vSphere v5.x (ESX 5.x, ESXi 5.x)

- Solaris Zones/Containers
- HOBLink (MS Windows)
- IBM Logical Partitions for AIX
- HP Itanium Virtualization
- Microsoft Hyper-V Server 2008*
- Microsoft Hyper-V Server 2012*

*Due to manner in which Hyper-V technology manages shared memory, Progress Software recommends that performance testing be carried out to verify that there is not a negative performance impact on OpenEdge applications.

- G. OpenEdge DataServer for Oracle certification table: The table below provides information on OpenEdge certification of Oracle for the OpenEdge DataServer for Oracle. The Oracle client version given in the table was used for certification testing. However, other client versions of the same Oracle release are also supported. The same version (listed in the “Oracle Certified Version” column) of Oracle Server and OCI Client Libraries were used for certification.

| Oracle Version | Oracle Certified Version | Windows | | Linux x86 on Intel | | IBM AIX PPC | | Solaris SPARC | | HP-UX PA-RISC | | HP-UX Itanium | SCO UnixWare |
|----------------|--------------------------|---------|--------|--------------------|--------|-------------|--------|---------------|--------|---------------|--------|---------------|--------------|
| | | 32-bit | 64-bit | 32-bit | 64-bit | 32-bit | 64-bit | 32-bit | 64-bit | 32-bit | 64-bit | 64-bit | 32-bit |
| 12c | 12.1.0.1.0 | 11.3 | 11.3 | 11.3 | 11.3 | ✗ | 11.3 | ✗ | 11.3 | ✗ | ✗ | 11.3 | ✗ |
| 11g R2 | 11.2.0.1 | 10.2A | 10.2A | 10.2A | 10.2A | ✗ | 10.2B | ✗ | 10.2A | ✗ | 10.2B | 10.2B | ✗ |
| 11g R1 | 11.1.0.6 | 10.1C | 10.2A | 10.1C | 10.1C | ✗ | 10.1C | ✗ | 10.1C | ✗ | 10.1C | 10.1C | ✗ |
| 10g R2 | 10.2.0.1 | 10.1A | 10.2A | 10.1A | 10.1A | 10.1A | 10.1A | 10.1A | 10.1A | ✗ | 10.1A | 10.1A | ✗ |
| 10g R1 | 10.1.0.2 | 10.1A | ✗ | 10.1A | 10.1A | 10.1A | 10.1A | 10.1A | 10.1A | ✗ | 10.1A | 10.1A | ✗ |
| 9i | 9.0.1.1 | 9.1E | ✗ | ✗ | ✗ | ✗ | ✗ | 9.1E | 9.1E | ✗ | 9.1E | ✗ | ✗ |

✗ : Not certified

- H. Web browser support: OpenEdge does not certify any specific Web browser with any release of OpenEdge product. If a problem arises using a specific Web browser, please contact Progress Global Customer Support for assistance.

- I. OpenEdge BPM Runtime support table:

| Platform | 32-bit | 64-bit |
|------------------------|--------|--------|
| Windows XP | X | |
| Windows 7 | X | X |
| Windows 2003 R2 | X | |
| Windows 2008 R2 | | X |
| Windows 8 | X | X |
| Windows Server 2012 | | X |
| Windows 8.1 | X | X |
| Windows Server 2012 R2 | | X |
| AIX 6.1 | | X |
| AIX 7.1 | | X |
| HP-UX 11i v3 PA-RISC | | X |
| HP-UX 11i v3 Itanium | | X |
| RH Linux 5 | X | X |
| RH Linux 6 | X | X |
| SUSE Linux 11 | X | X |
| CentOS 5.5 | | X |
| OEL 5.5 | | X |
| Solaris 10 SPARC | | X |
| Solaris 11 SPARC | | X |

- J. The following versions of Windows SBS (Small Business Server) are supported: Windows SBS 2003 R2, Windows SBS 2008, Windows SBS 2011, Windows Server 2012 Essentials, Windows Server 2012 R2 Essentials.
- K. Note on 32-bit and 64-bit x86 environments (Operating System and CPU): OpenEdge 11 32-bit products are supported on operating systems that can sustain either 32-bit or 64-bit kernel modes. However, for ODBC clients using the 32-bit OpenEdge ODBC driver, the SQL application must be compiled in 32-bit mode.
- L. Certification of Microsoft SQL Server 2012 for OpenEdge 11.1 and higher: Drivers Certified with MS SQL Server 2012:
- SQL Native Client 11.0 (OpenEdge 11.3 and higher)
 - SQL Native Client 10.0
 - SQL Native Client 9.0
 - SQL Server
 - Data Direct driver 6.1
- M. Report Builder Engine is not supported with tables that have Table Partitioning or Multi-Tenancy enabled against them. In addition:
- The Report Builder Engine will only work with tables in a partitioned database that are not partitioned. The Report Builder Engine will return an error if the report in question attempts to access a table in a partitioned database that has been partitioned.
 - The Report Builder Engine will only work with tables in a multi-tenant database that are shared tables. The Report Builder Engine will return an error if the report in question attempts to access a table in a database that has been defined as multi-tenant.

- N. Certification of Microsoft SQL Server 2014 for OpenEdge 11.5, Drivers Certified with MS SQL Server 2014:
- SQL Native Client 11
 - SQL Native Client 10
 - SQL Native Client 9
 - SQL Server
 - Data Direct ODBC 7.1 driver (OpenEdge 11.5 Legacy Wire Protocol Driver for MS SQL Server)
- O. The Advanced Enterprise Edition RDBMS (AEE RDBMS) is a multi-user relational database engine designed to support high-volume, distributed, and enterprise-level applications. It provides database services in both development and deployment environments. The AEE RDBMS has all of the functionality of the OpenEdge Enterprise database plus the functionality of Transparent Data Encryption, Multi-tenant Tables, Table Partitioning, Replication Plus, and OpenEdge Management.
- P. WEPOS (Windows Embedded for Point of Service) is a client only OS and does not support server products.
- Q. In OpenEdge 11.6 release, OpenEdge DataServer for Microsoft SQL Server has replaced “Legacy Wire Protocol Driver” with New Wire Protocol Driver (Data Direct SQL Server Wire Protocol ODBC Driver v7.1.5). Newly replaced Driver shall work with all existing certified Microsoft SQL Servers.

Notes on Linux

- General Linux Coverage: The Linux Operating System supports the following hardware platforms:
 - Intel x86 (32-Bit) ^(NB)
 - AMD64 (64-Bit) (NB)
 - Intel EM64T (64-Bit) (NB)
 - Itanium Processor Family
 - IBM zSeries (64-Bit)
 - IBM S/390 (31Bit)
 - IBM on POWER (IBM iSeries 64-Bit)

^(NB) Linux environments supported by OpenEdge

To support the different Linux platforms, there are an indeterminate number of Linux distributions in the market. Customers have consistently asked for stability, better performance, and reliability of the Linux platform as well as enterprise-class support. Progress Software cannot be effective in servicing customers if we attempt to support a large number of different Linux distributions. It is our intent to support a selected set of distributions that have long life cycles and that are well supported by the distributors and their partners. The primary Linux distributions supported are those from Red Hat and Novell SUSE (Enterprise editions only).

- Patches and Updates: Commercial updates are not automatically certified. Progress Software relies on the Operating System vendor to guarantee binary compatibility between their updates and kernel versions.
- Linux environment details: Support of the Network File System (NFS) protocol version 3 (NFSv3) under the Linux Intel x86 platform for Progress OpenEdge products, in particular the support of RDBMS files (physical and recovery) on a NFS partition, requires updates and features found within the 2.4.21 Linux Kernel and OpenEdge Service Packs. Network File System (NFS) protocol versions NFSv2 and NFSv4 under Linux have not been certified and are therefore unsupported.
- Linux support for IBM on POWER8 is only available on OpenEdge version 11.0. OpenEdge version 11.1 and above are currently not supported on the POWER8 platform

RHEL and/or CentOS for 6.x/7.x series are certified by Progress several different ways. Information available from RedHat and CentOS regarding each release from various sources help Progress determine what we can support and cannot support. The support matrix for Linux is listed below.

Red Hat has mentioned some regressions in later releases of version 6 such as 6.4/6.5/6.6. A majority of these have been fixed in 6.6. Progress plans to certify with RHEL6.5 and then 6.6. Once 6.5 is certified we will know the impact of these regressions and can address them accordingly. In the interim if a customer encounters any issues that prevent them from moving forward, they can look to upgrade to 6.6 with the appropriate patches (if they are on 6.4 and/or 6.5).

RedHat has stated that although they always take precautionary measures to avoid regressions in minor releases it sometimes happens. Of late the largest area of concern has been around encountering failures with drivers and other 3rd party components. RedHat and Progress suggest that customers test changes thoroughly for each minor release.

| Operating System | Notes |
|------------------------|--|
| RedHat 6.0 | Supported (inherited from OpenEdge 10.2B support) |
| RedHat 6.1 | Certified (Initial certification on RHEL 6.X series) |
| RedHat 6.2 | Based on the statement of minimal version support this stands supported. |
| RedHat 6.3 | Certified |
| RedHat 6.4 | Based on the statement of minimal version support this stands supported. |
| RedHat 6.5 | Based on the statement of minimal version support this stands supported(Certification testing forthcoming) |
| RedHat 6.6 | Based on the statement of minimal version support this stands supported(Certification testing forthcoming) |
| RedHat 6.7 | Based on the statement of minimal version support this stands supported |
| RedHat 6.8 | Based on the statement of minimal version support this stands supported |
| RedHat 7.0 | Certified |
| RedHat 7.1 | Based on the statement of minimal version support this stands supported |
| RedHat 7.2 | Based on the statement of minimal version support this stands supported |
| | |
| Oracle Linux 6.0 - 6.4 | Based on Binary compatibility between OEL and RHEL, this stands supported. |
| Oracle Linux 6.5 & 6.6 | Based on Binary compatibility between OEL and RHEL, this stands supported. (See RedHat release above) |
| Oracle Linux 6.7 – 6.8 | Based on Binary compatibility between OEL and RHEL, this stands supported. |
| Oracle Linux 7.0 – 7.2 | Based on Binary compatibility between OEL and RHEL, this stands supported. |
| | |
| CentOS 6.1 | Base certification |
| CentOS 6.2 6.4 | Based on the statement of minimal version support this stands supported. |
| CentOS 6.5 | Based on the statement of minimal version support this stands supported. (Certification testing forthcoming) |

| | |
|------------|--|
| CentOS 6.6 | Based on the statement of minimal version support this stands supported. (Certification testing forthcoming) |
| CentOS 6.7 | Based on the statement of minimal version support this stands supported. |
| CentOS 6.8 | Based on the statement of minimal version support this stands supported. |
| CentOS 7.0 | Certified |
| CentOS 7.1 | Based on the statement of minimal version support this stands supported |
| CentOS 7.2 | Based on the statement of minimal version support this stands supported |

OpenEdge Feature / Functionality Obsolescence Life cycle

The OpenEdge platform has a well-defined life cycle at the product (packaging) level. Product releases can be described as Active, Mature or Retired. Such a life cycle is appropriate for specific releases of products, but it is also necessary to have a finer level of granularity independent of the product life cycle which addresses the feature or functionality level. This includes operating systems as well as features. Features and functionality move through various phases from commercial introduction to obsolescence. As features become obsolete, they are handled in one of two ways: They can be **Deprecated** or **De-Supported**.

Definition of Deprecated: *Features/Functionality is identified as obsolete, but not removed from the supporting technology.*

Definition of De-Supported: *Features/Functionality is identified as obsolete, and removed from the supporting technology.*

For example, the English language like computer software is ever evolving, and certain 'olde' words drop out of fashion and are replaced. These 'olde' words are never removed but deprecated and may not be recognized by modern-day spell and grammar checkers although they are still commonly understood. In contrast, de-support of the phrase 'couch potato' has been requested by a number of potato farmers due to the negative image the term portrays, with the hope that this term drops out of dictionaries *and* usage.

The backward compatibility of OpenEdge-based applications and deployments are some of the key factors in determining if obsolete features can be **Deprecated** or **De-Supported**.

Typically OpenEdge language features are deprecated to ensure the support of existing applications where as de-support is used for functionality where the loss does not force application re-work.

Benefits of the Deprecated and De-Support life cycles phases include:

- Set appropriate customer's expectations regarding backwards/forwards compatibility
- Give customers sufficient time to consider and plan changes in their applications
- Promote rejuvenation and upkeep of applications, advantageous to partners and customers
- Better alignment with non OpenEdge technology partners such as Operating Systems vendors
- Encourage customers to use modern replacement features as appropriate

Deprecated Features and Functionalities:

Deprecation provides the ability to identify, communicate and manage obsolescence (and the possible eventual de-support) of features and functionality, independent of the products and versions in which they may be included and how are they packaged. Progress' recommendation is that deprecated features should no longer be used. Customers should consider substituting deprecated features over time with the newer replacement ones. Please note that:

- Deprecated features continue to function.
- Limited basic support will be available for deprecated features and functionalities.
- Deprecated features will not include further enhancements
- Communications will follow the 'Obsolescence Life cycle Guidelines' as described below

De-Supported Features and Functionalities

De-support is used where changes in technology or standards have made a feature obsolete and it is removed from the OpenEdge product. De-supported features typically have replacement equivalents and have no impact on backwards compatibility. Key details of De-Support include:

- OpenEdge dependant features will be removed, such as RAW partition support.
- Third Party dependent features, such as platform support may continue to function
- There will be no Limited basic support for de-supported features

- Communications will follow the ‘Obsolescence Life cycle Guidelines’ as described below

Obsolescence Life cycle Guidelines:

The following are the phases for the deprecation or de-support life cycle of features as they become obsolete:

- Prior to assigning one of the obsolescence statuses, features that are candidates for deprecation or de-support will be published to partners and customers for comment, potentially polling for information on the impact that the deprecation or de-support may cause to current applications.
- OpenEdge Product Management will use the information gathered from this process to assess the obsolescence of each feature or functionality.
- Details about de-supported and deprecated features will be included in this document.
- Announcements will be made to inform the Progress community of updates to features’ status.
- Deprecated and de-supported features will be identified as such in the Product Documentation.

Deprecated Features and Functionality List

The following table contains the current list of deprecated features and operating systems for OpenEdge 11. Timeframe details are published to help partners and customers with their planning. We recommend substituting obsolete functionality with appropriate equivalents as indicated in the following table.

| Deprecated Feature or Functionality | Replacement Feature | Deprecation Information | |
|--|--------------------------------|---|--|
| | | Announced OpenEdge version | Notes |
| Progress Explorer | OpenEdge Explorer | OpenEdge 10.1C | OpenEdge Explorer replaces Progress Explorer |
| SQL in 4GL | 4GL | OpenEdge 10.0A | SQL statements in 4GL code require the Progress V9 SQL-89 product. The SQL-89 interface is obsolete. |
| CHOOSE statement | Selection lists, Data browsers | OpenEdge 10.1A | Selection lists and data browsers are available on ChUI and GUI (Windows desktop); the functionality of the CHOOSE statement has been superseded by the new constructs, easier to use and with additional, more complete built-in behaviors. |
| EDITING clause in UPDATE, SET PROMPT-FOR | WAIT-FOR | OpenEdge 10.1A | EDITING blocks were required for ChUI procedural applications, prior to event-driven programming which provides much more flexibility, additional functionality and that are easier to learn by users. EDITING blocks are not appropriate for event-driven, multi-tier or Service-Oriented applications |
| GATEWAYS statement | DATASERVERS | OpenEdge 10.0A | GATEWAYS was an early term (V6) to refer to DataServers. The term was fully replaced by DATASERVERS, which provides identical functionality. |
| GO-PENDING statement | See notes | OpenEdge 10.1A | Dependency with EDITING |
| IS-ATTR-SPACE statement | Obsolete, not needed | OpenEdge 10.0A | ATTR-SPACE hardware terminals have been long ago superseded. They are not available, nor used anymore. IS-ATTR-SPACE adds product maintenance costs and backwards compatibility requirements not required by the market anymore. |
| PUT SCREEN statement | DISPLAY | OpenEdge 10.0A | This feature has become obsolete, and will not be enhanced. If needed, its functionality can be achieved with the DISPLAY statement. |
| SCROLL statement | See CHOOSE | OpenEdge 10.1A | See CHOOSE |
| Open Client ActiveX | Open Client. NET | OpenEdge 10.0A | Refer to the Open Client ActiveX statement of direction available on PSDN (http://psdn.progress.com/index.ssp) |
| RECID | ROWID | 10.1B (this entry was posted on May 17 2006) | Supported mainly for backward compatibility. For most applications, use the ROWID function, instead. Excerpts from the Product Documentation: “ROWID function replaces the RECID function for most applications. However, you must use the RECID function for maintaining schema objects (file and field relationships) in the Progress metaschema files.” |

| | | | |
|--|--|--|--|
| | | | NOTE: As with all deprecations, current RECID support and related ABL functionality remains 'as is'. No future RECID functionality enhancements are planned. |
| WORKFILES / WORKTABLES | ABL Temp-Tables | 10.1B (this entry was posted on June 26 2006) | It is recommended to use ABL Temp-Tables or ProDataSets |
| PROMPT-FOR (this feature will be removed from this deprecated feature list) | SET or UPDATE | 10.1B (this entry was posted on June 26 2006) | It is recommended to use the SET and UPDATE ABL commands in place of the PROMT-FOR statement Aug 6 2006 Update - PROMPT-FOR removed as ENABLE and WAIT-FOR are only viable alternatives for event-driven applications |
| DDE | Use Microsoft's Component Object Model (COM) | 10.1B (this entry was posted on June 26 2006) | Dynamic Data Exchange (DDE). Use Component Object Model (COM) instead. See product documentation: OpenEdge Development: Programming Interfaces |
| WIDGET-HANDLE | HANDLE | 10.1B (this entry was posted on June 26 2006) | There is absolutely no difference between WIDGET-HANDLE and HANDLE |
| Java applets | NONE | 10.2B | Remove the ability for Java applets to call ABL via the Java Open Client |

De-Supported Features and Functionality List

The following table contains the current list of de-supported features and operating systems for OpenEdge 11. Timeframe details are published to help partners and customers with their planning. We recommend substituting obsolete functionality with appropriate equivalents as indicated in the following table.

| De-supported Feature or Functionality | Replacement Feature | De-Support Information | | |
|--|--------------------------------|---|--|-----------|
| | | De-support Scheduled For | Notes | Status |
| RAW PARTITION support for database files | OS File System storage | OpenEdge 10.1A | Substitute with FILE-SYSTEM extents. With 10.1A, the RAW-PARTITION RDBMS extents are not supported. | Completed |
| OpenEdge DataServer for Oracle for HP UX 32-bit | None | OpenEdge 10.1C | Oracle is no longer selling the DataServer for the HP UX 32-bit platform | Completed |
| Windows 2000 Professional SP4 | Windows 2003 (SP1) | OpenEdge 10.2A | Windows 2000 (http://support.microsoft.com/life-cycle/?LN=en-us&x=10&y=6) <ul style="list-style-type: none"> General Availability: March 31, 2000 Mainstream support retired: June 30, 2005 Extended support retired: July 13 2010 | Completed |
| DB2 UDB 7.2 (MVS, RS/6000,NT) | DB2 UDB 8.1 or above | OpenEdge 10.2A | <ul style="list-style-type: none"> General Availability: June 8, 2001 End of support: September 30, 2004 http://www-306.ibm.com/software/support/life-cycle/index_a_z.html#D | Completed |
| Windows 2000 Server SP4 | Windows 2003 (SP1) | OpenEdge 10.2A | Windows 2000 (http://support.microsoft.com/life-cycle/?LN=en-us&x=10&y=6) <ul style="list-style-type: none"> General Availability: March 31, 2000 Mainstream support retired: June 30, 2005 Extended support retired: July 13 2010 | Completed |
